

Today's Learning Goal(s):

Date: _____

By the end of the class, I will be able to:

- evaluate the primary and reciprocal trigonometric ratios.
- find unknowns sides and angles using the primary and reciprocal trigonometric ratios.

Last day's work: p. 274 #1 - 8

5.1 Trigonometric Ratios of Acute Angles

Date: _____

Ex.1 Calculate x ,
to two decimal places.

Ex.2 Calculate θ ,
to one decimal place.

SOH CAH TOA

Three empty rounded rectangular boxes for writing the SOH, CAH, and TOA ratios.

RECIPROCAL Trig Ratios

Three sets of empty rounded rectangular boxes for writing reciprocal trigonometric ratios (csc, sec, cot).

Ex.3 Using a reciprocal trig ratio, calculate x , to two decimal places.

Ex.4 Calculate θ , to one decimal place.

$$\sec \theta = 1.65$$

Are there any Homework Questions you would like to see on the board?

Last day's work: p. 274 #1 - 8

Today's Homework Practice includes:

pp. 280-282 #1 – 12, 14 [18, 20]
