

## Today's Learning Goal(s):

By the end of the class, I will be able to:

- Identify the “order of the moves” when graphing using transformations.
- State the domain and range for “multiple move” transformations.

### 3.1.5 Graphing Quadratic Functions Using Transformations

Date: Mar 8/19  
(Every lesson)

$$f(x) = a(x - h)^2 + k$$

Correct yesterday's worksheet:

**a -- p. 39 E,F**

**h -- p. 39 C,D**

**k -- p. 38 A,B**

**You will be completing an EXIT card 10 minutes before class finishes.**

Possible Transformations: (RST)

R: reflection in the x-axis

S: vertical stretch (v.s.) by a factor of a

OR vertical compression (v.c.) by a factor of \_\_\_\_\_

T: horizontal translation (h.t.) h units to the right or left

T: vertical translation (v.t.) k units to up or down

$$y = a(x-h)^2 + k$$

$V(h, k)$

Ex. 1 i) Identify the values of the parameters  $a$ ,  $h$ , and  $k$ .

ii) Identify the transformations.

iii) Use transformations to sketch each graph.

iv) State the Domain and Range.
