

Today's Learning Goal(s):

By the end of the class, I will be able to:

- a) Select and apply factoring and graphing strategies to solve applications involving quadratic functions

MCF 3MI

3.5 Solving Problems Involving Quadratic Functions

Date: Mar 21/19

Problems involving Quadratics can be solved using strategies such as:

- » a table of values (t-chart, or T of V)
- » graphing
- » factoring

Recall:

- "a" determines the direction of opening
 - > so it tells us if there is a maximum or minimum value
- draw a sketch of the scenario
- to find the maximum or minimum value:
 - > write the equation in standard form
 - > factor
 - > determine the zeros (aka. x -intercepts)
 - > determine the axis of symmetry
 - > sub the A.of S. into the equation to find the corresponding y -value (this is the max/min value)

Ex.1: A ball is thrown off a cliff.

The height of the ball above the ground after it is thrown is modelled by the function,

$$h(t) = -5t^2 + 10t + 175$$

where $h(t)$ is the height in metres and t is the time in seconds.

- a) How high is the cliff?
- b) When will the ball be 160 m above the ground?
- c) When will the ball hit the ground?
- d) What is the maximum height that the ball reaches?
- e) State the domain and range for this function.

a) How high is the cliff?

Find $h(t)$ when $t=0$.

$$h(t) = -5t^2 + 10t + 175$$

$$h(0) = -5(0)^2 + 10(0) + 175 = 175$$

the height of the cliff is 175 m.

b) When will the ball be 160 m above the ground?

$$h(t) = -5t^2 + 10t + 175$$

$$160 = -5t^2 + 10t + 175$$

$$0 = -5t^2 + 10t + 175 - 160$$

$$= -5t^2 + 10t + 15$$

$$= -5(t^2 - 2t - 3)$$

$$= -5(t+1)(t-3)$$

$$t+1=0 \quad \text{or} \quad t-3=0$$

$$t=-1 \quad t=3$$

inadmissible [time ≥ 0]

the ball will be 160 m above the ground at 3 s.

c) When will the ball hit the ground?

$$h(t) = -5t^2 + 10t + 175$$

$$0 = -5t^2 + 10t + 175$$

$$= -5(t^2 - 2t - 35)$$

$$= -5(t-7)(t+5)$$

$$\therefore t=7 \quad \text{or} \quad t=-5$$

inadmissible

the ball will hit the ground at 7 s.

e) Domain: $\{t \in \mathbb{R} \mid 0 \leq t \leq 7\}$

Range: $\{h \in \mathbb{R} \mid 0 \leq h \leq 180\}$

$$y = -5t^2 + 10t + 175$$

d) What is the maximum height that the ball reaches?

find the vertex; $\frac{1}{2}$ between

AoFs: $t = \frac{7 + (-5)}{2}$ the zeros

$$= \frac{2}{2}$$

$$t = 1$$

$$h(1) = -5(1)^2 + 10(1) + 175 = 180$$

the maximum height the ball reaches is 180 m.
