

Ch. 6 Review work: pp. 404-405 #1 – 3, 6, 8 – 10, 12, 13

Study for the Unit 6 Summative!!

p. 404 **Lesson 6.2**

3. Sketch the graph of a sinusoidal function that has a period of 6, an amplitude of 4, and whose equation of the axis is $y = -2$.

p. 404

6. A ship is docked in port and rises and falls with the waves. The function $d(t) = 2 \sin(30t)^\circ + 5$ models the depth of the propeller, $d(t)$, in metres at t seconds. Graph the function using a graphing calculator, and answer the following questions.

- What is the period of the function, and what does it represent in this situation?
- If there were no waves, what would be the depth of the propeller?
- What is the depth of the propeller at $t = 5.5$ s?
- What is the range of the function?
- Within the first 10 s, at what times is the propeller at a depth of 3 m?

$$\begin{aligned} \text{a) period} &= \frac{360}{|k|} & \left. \begin{aligned} k &= \frac{360^\circ}{\text{period}} \\ &= \frac{360^\circ}{30} \\ &= 12 \text{ sec} \end{aligned} \right\} \end{aligned}$$

$$\text{c) } t = 5.5$$

$$\begin{aligned} d(5.5) &= 2 \sin(30(5.5)) + 5 \\ &= 2 \sin(165) + 5 \\ &\approx 5.517 \\ &\approx 5.52 \end{aligned}$$

\therefore the time to rise & fall each time

$$\text{d) } R: \{d \in \mathbb{R} \mid 3 \leq d \leq 7\}$$

$$\begin{aligned} \text{e) } d(t) &= 2 \sin(30t) + 5 & \left. \begin{aligned} 0 \leq t \leq 10 \\ d = 3 \end{aligned} \right\} \\ 3 &= 2 \sin(30t) + 5 \end{aligned}$$

$$3 - 5 = 2 \sin(30t)$$

$$-2 = 2 \sin 30t$$

$$\frac{-2}{2} = \sin 30t$$

$$-1 = \sin 30t$$

$$\text{let } w = 30t$$

$$\sin w = -1 \quad \text{graph}$$

$$\therefore w = 270$$

$$\therefore 270 = 30t$$

$$t = 9$$

p. 405

12. Determine the sine function $y = a \sin k(\theta - d) + c$ for each graph.

a)

$$a = \frac{\text{max} - \text{min}}{2}$$

$$= \frac{3.5 - 1.5}{2}$$

$$= \frac{2}{2}$$

$$= 1$$

$$c = \frac{\text{max} + \text{min}}{2}$$

$$= \frac{3.5 + 1.5}{2}$$

$$= \frac{5}{2}$$

$$= 2.5$$

$$\frac{1}{2} \text{ cycle} = 6$$

$$\therefore \text{whole period} = 12$$

$$\therefore k = \frac{360}{12}$$

$$= 30$$

b)

$$y = 1 \sin(30(x-4)) + 2.5$$
