## Unit 6: Analyse linear Relations (Ca. 6)

Learning Goals: By the end of the unit students will be able to:

- Determine slope, and understand the relationship between rate of change and slope
- Express the equation of a line in any of the forms $y=\mathrm{m} x+\mathrm{b}, \mathrm{A} x+\mathrm{B} y+\mathrm{C}=0, x=\mathrm{a}, y=\mathrm{b}$
- Identify the geometric significance of $m$ and $b$ in the equation $y=m x+b$
- Graph lines by hand, using a variety of techniques.
- Determine the equation of a line from information about the line.
- Determine graphically the point of intersection of two linear relations, and interpret the intersection point in the context of an application.
